Biometry practical 1

Illustrated (imperfect) practical guide

If there will be something unclear in following guides, ask from the teacher!

Solving the exercises punctually following the guides without understanding, why something must be done, is not very useful ...

Preparatory work

- 1. Save the questionary data of previous courses (<u>http://www.eau.ee/~ktanel/VL_0413/ankeet.xlsx</u>),
- 2. open the saved fail in MS Excel,
- 3. rename the first worksheet containing the dataset as 'Andmed' (or 'Data'),
- 4. rename 'Sheet2' to 'Praks1' (or 'Practical 1'),

N Sheet1 / Sheet2 / Sheet3 /	Andmed Praks1 / Sheet3 /
	\rightarrow

5. make a copy of the datatable (from worksheet 'Andmed') and paste it into the upper left corner of the worksheet 'Praks1'.

Tanel Kaart, Alo Tänavots, Mirjam Vallas

Exercise 1.

- Construct the frequency table to variable 'BREAKFAST',
- sort the frequency table by frequencies from largest to smallest values, and
- illustrate the frequency table with barplot. Format the barplot to be normal also in black and white printout.
- Calculate relative frequencies and construct the barplot also based on those.

Guide

- 1. Put the cursor into some cell in the datatable (in worksheet 'Praks1').
- 2. Insert \rightarrow PivotTable

	File H	ome Insert
	PivotTable Ta	ble Picture Clip
	Tables	Art
	B3 (*	<i>f</i> _x 158
	A	B C
	1 GENDER	LENGTH WEIGH
	2 W	170
	3 W	158 4
3.		
Create PivotTable	¤) If you pu	t the cursor into

Pivot Table

Copied values

For figure construction use copied values (and without *Grand Total* row)!

ILE	HOME	INS	ERT	PAGE L	AYOUT	FORMUL	.AS	DATA
les III	lustrations	Apps	Recon C	nmended harts	2-D Colu	mn		vo Vi ei
	Rov san cer oth por not	v Label dwich eals or er ridge hing	Count	of E REAL 18 17 12 6 1	3-D Colu 400 400 400 400	mn]

Try to format the figure in the following way.

- Delete figure title and add axes with major tick marks
- Mark the major gridlines with light grey dotted lines
- Put titles to x- and y-axis, move the x-axis title inside the plot area; change the text color to black
- Present the axis units in size 10 and axis titles in size 12
- Fix the maximum of y-axis to 20 , minimum to 0 and major unit to 5
- Change the gap between bar to 120%
- Remove the border of the chart area and add grey border to plot area

7. Calculate relative frequencies, present these in percentages and make a new barplot.

8. **Describe the absolute and relative frequencies** – write down some sentences using for example *Text Box* (from *Insert*-tab).

Exercise 2.

Construct the frequency table to variable 'PORRIDGE' and illustrate this table with pie plot.

Guide

Analogical to exercise 1 (it is not necessary to sort the frequency table and to calculate the relative frequencies).

Add the frequencies in percentages into the figure.

Expected result:

Describe the results with some sentences (write down these conclusions)!
